Onboarding Manager: System Update

HR USER INTERFACE SYSTEM CORRECTIONS

User Maintenance

The Customer Restriction page will now display the list of customer offices in alphabetical order.

The customer restriction will no longer apply a system-wide restriction on a HR user account when the user is restricted from accessing a customer office that shares the same customer office name across multiple agency offices. The customer restriction will apply only to the specified customer office(s) in the selected agency office.

Toolbox

When a HR user deactivates a selectee account this action also deletes the selectee login credentials. To reactivate the account, the HR user must click the **Resend Login** button in the Toolbox to allow the selectee to create new login credentials.

Transmit Forms

The Transmit Forms page now displays the appropriate transmission type tabs for agencies who do not utilize eOPF as a system of record.

System Tables

All tables in the system now default to 25 as the lowest number of entries displayed on the first page of a table.

Timeout Warning Message

The non-functioning button on the timeout warning message has been removed.

SELECTEE INTERFACE SYSTEM CORRECTIONS

System Navigation

The HR Contact information is restored and displays on the help menu bar within the selectee record.
